

I am strongly against the FCC's proposal for recording programming from 6A-10P. This would place a harsh burden on the station. The cost of purchasing the equipment, the cost of maintaining and operating the equipment and the additional staff required to handle the actual recording and then the indexing and archiving for three months. Large chains would be able to afford this due to the economy of scale, but it would be crippling to small market stations. It seems just another step to remove all the small broadcasters from the local communities. What a sad day for America if this happens.
